

SURVEYS & INSPECTIONS

PERFORMING SURVEYS AND INSPECTIONS QUICKLY,
ACCURATELY AND COST-EFFECTIVELY

CENNOX CAN HELP IN ALL PHASES OF THE SURVEY WORK FLOW

Information is time sensitive; what was true last week or last month may have changed. You need to know what has changed and how things are right now to effectively manage your business. But collecting and managing all that information is expensive, resource intensive and time consuming. That is where Cennox comes in. Our nationwide field service team is trained and experienced with performing surveys and inspections quickly, accurately, and cost effectively. The results can be immediately made available on our secure customer portal for you to review.

The following are types of surveys and inspections that the Cennox team regularly performs: legal and regulatory compliance, site and facility, quality and condition, lighting and electrical, equipment inventory and custom surveys.

SURVEY TEMPLATE CREATION

We will work with your team to convert your existing survey (in any format, including hard copy) to the Cennox digital format. You can create as many templates as you want to encompass different surveys, and each can be versioned to allow for day-forward changes without data conversion.

SURVEY DATA COLLECTION

There are many ways to get the survey data into our digital format:

- Cennox can perform the inspection and input the data.
- Your personnel can perform the inspection and input the data.
- Your personnel can perform the inspection on paper copies and Cennox can input the data.
- You can send data electronically in digital docs or directly from your systems via web services.
