

DEEP CLEANING/ FOGGING SERVICE

“*Today is more important than ever to reassure your customers that your business is clean and safe to use as increased virus concerns rise.*”

QUICK SANITIZING COVERING LARGE AREAS

Effective Fogging Solution to Eliminate Viruses

Cennox has experienced technicians available across the United States to provide deep cleaning and sanitizing services. Our mission is to keep businesses operational and viral free by providing a fogging disinfection service to help minimize germs and viruses from surviving.

The fogger is an electric ULV cold fogger sprayer, which is small and convenient to use and maneuver around small spaces. The application process is used to treat large areas to control borne transmitting viruses.

Our teams are also available to undertake our deep clean service during business downtime and/or closures. The virus can stay active on some surfaces for 9 days- our deep cleaning and fogging service will help keep your facilities clean at the convenience of your operations.

Our service technicians, who provide national coverage in all major metropolitan areas in the 48 continental states and Alaska, can reach the sites required to provide a clean and sanitized environment for your customers.
