

# ATM anti-gas solution

— GAS DETECTION AND PROTECTION SYSTEM

An advanced monitoring and alarm mechanism, completely hidden from view.

Our gas detection solution is preventing criminals worldwide from feeding explosive gases into the ATM. We provide a host of connected security pathways when a crime is in progress, from the gas being neutralised, ink deployment to destroy the cash inside the ATM and the criminal's prize, plus alarms to warn anyone nearby of the attack in progress and the financial organisation themselves.

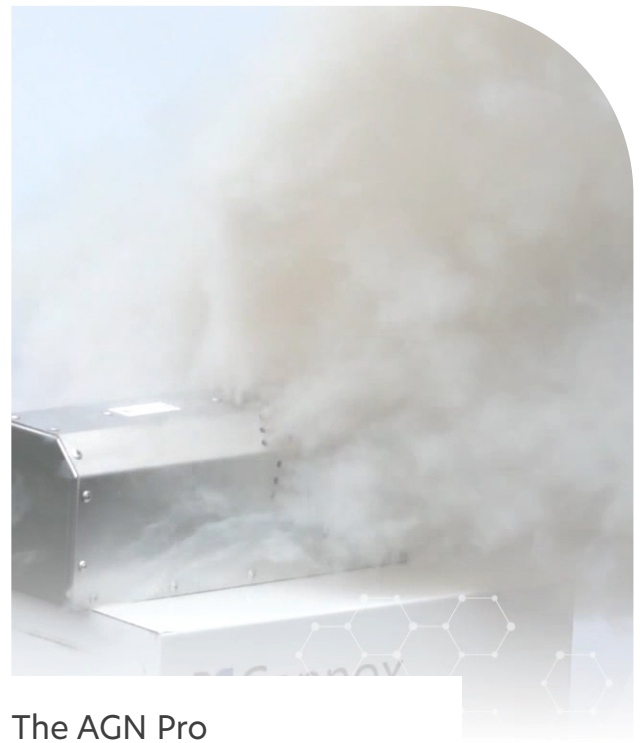

---

## The AGN Pro - How does it work?

The Gas Detection System includes an advanced monitoring and alarm mechanism, all totally hidden from view.

Our solution is designed to sit covertly within the ATM and react immediately as soon as a threat is detected. With a host of built in features, our anti-gas detection solution can provide a response tailored to the requirements of our customer.

An advanced security solution, our AGN Anti-gas device has prevented many attempted incidents and saved our customers from the devastation and explosive attack can cause on their infrastructure, business and impact on the local community.

The AGN Pro
