

# Protection against deep insert skimming

— THE ASD-SENTINEL

Proactive threat detection to counter fraud and customer data theft

The specially designed insert provides the immediate physical protection against the growing menace of razor thin skimmers. The ASD-Sentinel, an internal anti-skimming solution, is installed within the card reader, providing a continuous and cost effective solution.

---

## About the Sentinel

Our Research & Development team, the same team who created the hugely successful ASD-8 Anti-Skimming Device, developed the ASD-Sentinel in response to the actual threat highlighted by our customers.

The ASD-Sentinel requires no changes to your ATM's hardware or integration into the software. The impact is immediate and the protection against razor skimmers being illegally installed on your ATM is assured.

## Installing the ASD-Sentinel

The ASD-Sentinel is a quick installation and one that can be carried out in the field by a Cennox trained engineer. With a typical installation taking less than an hour, there is minimal disruption to your branch or staff and the ATM being out of service.

If you would like to know more about how Cennox can install the ASD-Sentinel on your estate, please contact your Account Manager or a member of the Cennox sales team at **info@cennox.com**.
