

# Protection against physical attacks

---

## ATM SECURITY BARRIER

Reduce property damage and cash loss with the ATM Security Barrier.

---

Cennox provides and installs physical protection with the ATM Security Barrier at facilities throughout the United States. The Cennox Projects' Engineering Team developed the ATM Security Barrier based on recent ATM physical attacks such as ram raids, hook and chain and smash-and-grabs, and can be installed on existing drive-thru ATM bollards at financial institutions.

---

## About the ATM Security Barrier

The barrier's steel plating stops criminals from accessing the front side of the ATM, where it is most vulnerable. Cennox includes our one-of-a-kind unique security lock enclosure to stop criminals from cutting through the ATM Security Barrier lock. Innovations like these allow us to be at the forefront of providing our customers with the solutions required.

---

### KEY FEATURES

- + Adaptable installation on existing bollards
- + Upgrades and add-ons available
- + Robust steel construction
- + One-of-a-kind unique security lock enclosure
- + Commercially welded parts
- + Custom colors / branding available

### ADDITIONAL OPTIONS

- + Two lock options available
- + Cennox exclusive ATM audible alarm configuration and strobe light

The commercial welded ATM Security Barrier components allow the ATMs to be upgraded on site to customer specifications.

ATM Audible Strobe Alarm

---

The ATM Security Barrier can be used alongside the Cennox ATM Audible Strobe Alarm to provide an additional layer of security. Both alarms connect to the ATM's alarm panel and provide immediate alerts to the bank when potential threats are detected.
