

All-in-one EV solution

INFRASTRUCTURE AS A SERVICE PROGRAM

Infrastructure as a Service (IaaS) is an EV infrastructure network and operating program, focused on addressing a large and rapidly growing gap in infrastructure investment to support community electric vehicle charging solutions in multi-family, workplace, hospitality, and many other communities.

All hardware, software, and installation costs, including the costs of getting power to parking spaces, are covered in the repayment terms of the IaaS program, enabling asset holders and operators to provide their EV driving tenants, guests, and customers with a world class integrated EV charging solution, with no upfront costs.

The all-in-one EV charging program includes

- + EV charging hardware
 - Choose from Level 2 or DC fast charging
- + Turnkey installation
 - Certified nationwide installation
- + Cloud software
 - To power your infrastructure operations
- + Reliability and maintenance
 - 24/7 support

The IaaS program is addressing a major pain point for drivers and asset holders today and paving a path towards accelerated EV adoption and revenue generation.

Contact us to see if you're in an IaaS approved state and start taking advantage of this all-in-one program today!

Retain up to **50%** of revenue over a three, five, seven, or ten year contract with absolutely **ZERO** upfront costs!
