

Onsite ATM Refresh, Repaint & Cleaning Service.

Our nationwide field teams provide onsite refresh and repainting services for areas around ATMs. This high impact, transformational attention restores worn and damaged branding, chipped or faded paint and can include repairing shelves, bezels, lighting and fascias where damage has occurred.

our onsite visit**

Customized approach

Cennox can build personalized refresh programs to improve areas surrounding the ATM by repainting and repairing damaged or worn spaces. In addition, our onsite visit can also be used to update any out of date branding, decals, survey the site for any compliance or security requirements, even expand our refresh service to surrounding walls, canopy, pavements and green areas.

Visits scheduled and recorded

Cennox builds visit schedules around each customer, ensuring they know when each visit will happen. In addition, each visit is recorded in real time, with photographic and written reports. These records provide customers with visibility over both their project and also each visited site.

Why choose Cennox?

We are trusted by the financial sector to maintain their in-branch critical infrastructure and can provide the widest range of ATM centric services. Our nationwide footprint and capabilities offer customers with an attractive one supplier solution to undertake all of their banking equipment, security and facility needs.
